

PAN Fan (Peter)

Hello,

I'm very interested in the [SCM] Sr. Business Analyst position you are offering, as a professional having experience in the supply chain management with focus on data analysis. My past successful achievement on OTD & cost effectiveness improvement and data analysis capability will make me a great candidate.

I joined my current employer 4 years ago as SCM Management Trainee. During the first 3 years of the MT program, I rotated in 3 different positions covering logistics, materials planning and direct materials sourcing. After off-program in 2016, I'm currently working as senior APAC regional materials & planning analyst. Through that past experience I gained lots of solid hands-on experience on full circle of supply chain management, also I was cultivated to a team player with good communication skills throughout cross functions cooperation.

Besides the supply chain management expertise, I have some database development capability by using SQL Server and Access. After self-study on SQL, I developed 2 databases (one for supplier development program management, another for materials planning management mapping purchase progress with sales demand). They are working in place bringing lots of convenience on information flow management as well as data cleanup for further data mining.

Furthermore, I have strong interest in data analysis which is also one important part of my current job. As a regional materials & planning analyst, I'm responsible for regions inventory & logistics performance. So one of my key jobs is to let data show and explain the root causes of high inventory amount or how much saving we can get after some logistics optimization. Besides, I'm studying more advanced analysis skill by Johns Hopkins University's Coursera course Data Science Specialization, and now has already had certain Exploratory Data Analysis capability with R.

With these qualifications, I am confident I am a qualified match for the Sr. Business Analyst position. If you have any questions, feel free to contact me (fanpan.cn@outlook.com, 18801967439). Thanks and have a good day!

Regards,
Pan Fan (Peter)
